

DanTemplates readme
VERSION 0.1
By DanSoft Australia
<http://dansoftaus.r8.org/>

1. Welcome!
2. How to use the Template designer
3. How to use the HTML editor
4. Contact us!

1. WELCOME
=====

You're probably wondering what you are doing here, reading a Readme file that uses Courier New as the font... HAVE WE GONE BACK IN TIME TO THE YEARS OF DOS WITH PROPORTIONAL FONTS!?!?!? Well, you are reading the readme for DanTemplates 0.1 (thank god ;))! I hope you enjoy using DanTemplates as much as I "enjoyed" making it

2. HOW TO USE THE TEMPLATE DESIGNER THINGY
=====

Well, you begin with a screen that looks like this, where you design your template.

A 'section' is a bit of information that you could change in any HTML document that you create which uses that template, eg, navigational tools, copyright notice, the main section (obviously), keywords and descriptions (meta tags - see pic to right). To add a section, click the 'Add new section' button. It will ask you the name of the section and the default text for the section - see the default one if you don't understand. It will also ask you if you want the section to be editable in

the HTML editor. If you don't tick the box, the section will still exist, but you can't edit it in the HTML editor. This is useful for a section that is the same for an entire site, eg. a copyright line. To tell it where that section is located in the template, type the section name enclosed in ':::'s eg, :::main:: or :::nav::. You can put a section more than once on the page; eg navigation buttons on top and bottom. You can put the page title anywhere on the page by putting in ':::title::'. Have fun creating template - I recommend that you create your template in FrontPage or a similar program and then cut and paste it in.

<next page, please>

3. HOW TO USE THE HTML EDITOR

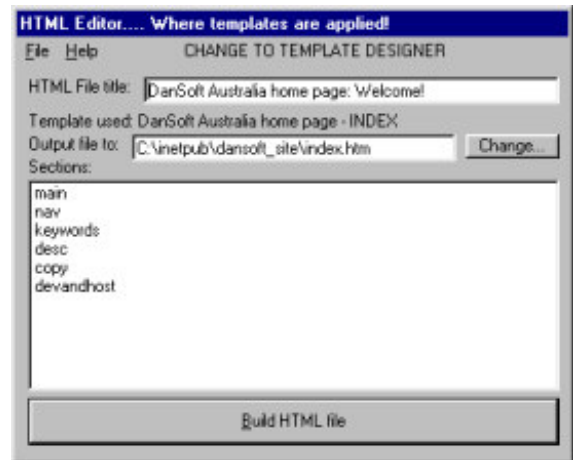

=====

First, choose your template by going into the File menu and clicking 'Choose Template...' or press F2. Then, choose where the end HTML file will be output to, with the 'Output file to' box. Edit the sections by double clicking on the section name, and then typing the text to put into that section. Then, click 'Build HTML file' and it will output the file to where you chose in the 'Output file to' box. Easy as pi -

4. CONTACT US

=====

You can visit our website at <http://dansoftaus.r8.org/>, if that site doesn't work then go to <http://dansoftaus.uni.cc/>. If you want to contact me, then go to the form at <http://dansoftaus.uni.cc/aboutus/feedback.htm>. Have fun!

<end of text>

You can go away now; you've read the whole readme file!

I'm serious, there's no more!

I'm leaving now!
